UNSW Bengaluru
Embassy Manyata Business Park, Nagavara
Bengaluru 560045, Karnataka, India

Re: Application for Assistant Professor, Computer Science — UNSW Bengaluru Campus

Dear Members of the Selection Committee,

I am applying for the position of Assistant Professor, Computer Science, at the UNSW Bengaluru campus. I am currently Assistant Professor in CSE (Data Science) at DSATM, Bengaluru, and a doctoral researcher at Visvesvaraya Technological University. My sixteen years split evenly between the two worlds this campus sits between: eight years building banking and capital-markets software at Infosys and Accenture, and eight years teaching computer science and publishing applied AI research. What I would most want you to know about me is simple: when a course needs software to make its ideas visible, I build it.

CPU Rush is the clearest example. My Operating Systems students do not read about scheduling, paging, deadlock and file systems — they predict how each behaves, commit to an answer, and a server grades every decision. Data Structure Design Studio turns data structures into a progressive, scored decision track under changing constraints. Game Forge generates single-file browser games, one concept each, from an editable design doctrine. ButterCloud Quiz asks students to choose the best stack and architecture for Eight such tools are public at github.com/maheshbasavaraj, most in daily classroom use, and every new course I teach keeps producing more — students decide, then watch the machine answer, which is where the learning actually happens.

I have taught object-oriented programming, data structures, operating systems, database systems and deep learning at undergraduate and postgraduate level, and I supervise final-year capstone projects end to end. At DSATM I designed and led a six-month Agentic AI immersion programme with Capabl and run faculty development programmes for colleagues. I am ready to adopt UNSW's myExperience framework and the Integrated Curriculum Framework, to work within standards-based, criterion-referenced assessment, and to complete Ready to Teach alongside colleagues from Kensington.

My research — Agentic AI, large language models and spatio-temporal deep learning — has produced three utility patents, a published patent application in synchronised social-VR IoT networks, and eleven peer-reviewed papers, including recent work on multi-scale spatio-temporal attention networks, lightweight multi-agent Q-learning for wireless IoT, and LLM-based agent systems as a route to general intelligence. The campus's focus on artificial intelligence, and its Centre of Excellence in AI and Innovation with Deloitte India, is where I want to work: applied research that produces both publications and capability.

Eight years in industry also taught me what employers expect from a computer science graduate. At Infosys I worked on Finacle, the universal banking platform; at Accenture I built capital-markets systems for international clients. I would bring that into work-integrated learning — industry projects, internship pipelines, and assessment built around real repositories, code review and delivery discipline.

UNSW Bengaluru offers a top-20 global degree with local consequence, and Progress for All is a mission I can teach to. The chance to help establish a new campus's standards rather than inherit them is rare. I am based in Bengaluru, ready from the first teaching period, and glad to demonstrate CPU Rush live or teach a class on any topic in the curriculum.

Yours sincerely,

Mahesh Basavaraj
